

Safety · Effectiveness · Integrity

Vision

To be the leader of operational safety auditing in an accident-free world.

Strategic Pillars

Safety	Effectiveness	Integrity
<ul style="list-style-type: none"> - Support and uphold improvement of global safety levels through implementation of IOSA - Maintain and advance IOSA as world's leading operational safety Standard - Support consistent implementation of SMS - Adopt applicable ICAO safety requirements from the Annexes to the Convention on International Civil Aviation 	<ul style="list-style-type: none"> - Minimize the number of redundant audits through effective use of IOSA - Continuously improve IOSA Program processes and protocols - Ensure robust Audit Program infrastructure is in place - Constantly seek opportunities to simplify the program processes. 	<ul style="list-style-type: none"> - Protect and promote the integrity of the IOSA Program - Continuously monitor and improve conformity with Audit processes - Operate in full alignment with IATA's vision and mission - Provide an environment that fosters commitment to proficiency and due professional care

SFO's mission

“Promote safe, secure, efficient and economical air transport that is environmentally sustainable and based on quality.”

Alignment between IOSA Strategic Pillars and SFO Strategy 2015-2017

The IOSA Vision and its Strategic Pillars are in full alignment with

- SFO mission and Strategy
- IATA Six-Point Safety Strategy
 - Enhanced quality and compliance
 - Support consistent implementation of Safety Management System (SMS)

The Strategic Auditing Plan 2015-2017 fully commits, adopts and embraces the IOSA Vision and Strategic Pillars.

Safety

- Finalize the roll-out of the Transition Plan and support member airlines to meet the Enhanced IOSA implementation deadline by September 2015. Support the Regions in increasing the number of airlines on IOSA Registry. Increase the IATA presence in the IOSA training area.
- Enhanced quality and compliance (Six-Point Safety Strategy)
- Support consistent implementation of Safety Management System (Six-Point Safety Strategy)

Effectiveness

- Reduce the number of audits performed by regulators and the private sector by working with regulators to accept IOSA, ISAGO and other IATA audit programs as equivalent means of assessing compliance.
- In consultation with stakeholders, further evaluate the areas of opportunities to harmonize and standardize Operational Auditing processes. Strengthen the existing ISO procedures and develop detailed work instructions to ensure management consistency.
- Identify and develop the solution that will allow the audit programs to mitigate the risk of relying on the underperforming external vendor (for IOSA, ISAGO, ISSA, IEnvA), that also offers a value proposition to the other IATA audit programs (IFQP, DAQCP, IDQP) and a better interface with GADM.

Integrity

- Strengthen the oversight on the AOs
- Standardize the auditing among all IOSA Auditors
- Advance the IOSA Auditor qualification requirements and oversight
- Further facilitate IOSA Auditors' commitment to proficiency and due professional care
